

ABSTRACT OF THE DISCLOSURE

5

A carrier for an image developer for electrophotography, including core particles, and a coating layer covering each of the core particles, wherein the core particles have a weight average particle diameter of D_v which is 25-45 μm and a number average particle diameter of D_p which meets with the following condition:

$$1 \leq D_v/D_p \leq 1.3,$$

wherein the core particles have such a particle size distribution that particles having a particle diameter of less than 44 μm is at least 70 % by weight and particles having a particle diameter of less than 22 μm is not more than 7 % by weight.
